Abstract

Research funds are the most important components of the research cycle. The research share of Gross National Income in different countries has always been regarded as an important indicator. In the present study, using data in the Web of Science, published by Thomson Scientific Institute publications to examine the effects of research budget on quantity and quality of universities’ publications. The results showed that there is a direct link between quantitative and qualitative indicators at universities’ level and budget and finance receive for research and there are a small percentage of publications of research funds are subject to.

Keywords: research funding, research, universities, research institutions
